# Contents

1. How to access and run the notebooks
2. Notebook: 01\_profiling.ipynb
3. Notebook: 02\_numba\_intro.ipynb
4. Notebook: 03\_numba\_blond.ipynb
5. Notebook: 04\_numba\_cuda.ipynb
6. Notebook: 05\_cupy\_cuda.ipynb
7. Summary

# How to access and run the notebooks

- Github repository: <https://github.com/kiliakis/Py4HPC>
- Notebooks 01, 02, 03: Can run in Swan or your PC.
- Notebooks 04, 05: Need a GPU
  - [ml.cern.ch](https://ml.cern.ch) (access only from within CERN)
  - Google colab: <https://colab.research.google.com/>
  - Or your PC if it has an Nvidia GPU
- **You do not need to run the notebooks during this tutorial!**
  - You may do it later if interested.

# Notebooks presentation..

# Summary

- **Profiling is essential for performance optimization**

Tool	Notebook	Command Line	Profiling
timeit	Yes	No	Single function
line_profiler	Yes	Yes	Line by line
cProfile	Yes	Yes	Call stack

- **Performance Optimization/ Acceleration Tools**

Tool	CPU	Multicore	GPU (Nvidia)	GPU (AMD)	User functions	Numpy/ Scipy
Numba	Yes	Yes	Yes	No	Yes	No
CuPy	No	No	Yes	Yes	Yes	Yes

# Other HPC tools

- **Dask** (<https://www.dask.org/>): Scale calculations in multiple nodes, supports libraries like NumPy, Pandas, scikit-learn.
- **MPI4PY** (<https://mpi4py.readthedocs.io/en/stable/>): Interface to the MPI library in Python, for distributed computing.
- **Cython** (<https://cython.org/>): A superset of Python, that makes writing C extensions for Python easy.
